

We really love our work.

We only think about our work and this alone.

Thus even when it seems that we have reached the top,
we are never satisfied as we are convinced that there is
always room for improvement, be it some small detail,
perhaps insignificant for others, but not for us.

Gabriele Rumi

FONDMETAL

50th ANNIVERSARY

\ 13

### **\\** FONDMETAL INDUSTRY

1984. Full production dedicated to Gravity die cast wheels.

1988. First wheel with insert for AM. Implementation of painting process.

1989. Implementation of machining process.

1990. First Gravity die cast wheel for OE customer.

1995. Implementation of logistic department.

2003. First Low pressure die cast wheel for OE customer.

>20005

# FONDMETAL THE TIMELINE

>1972

### **\\** THE BEGINNING

1972. Aluminium sand cast for Automotive & Industrial parts.

1976. First Gravity die cast AM wheel under the brand 2R (Ruote Rumi).

# \\FONDMETAL F1

>1990s

1990. Creation of Fondmetal F1 team to compete in the F1 World Championship.

1993. First aerodynamic R&D center for race cars and wind tunnel testing in Italy.

1997. Acquisition of the majority in Minardi F1 team.

1999. Fondmetal V10 is developed and used on Minardi's F1 cars.

### **\\** TECHNOLOGICAL PROGRESS

2015. Fully automatic inspection equipment for X-Ray and leakage tests.

2018. Implementation of dedicated diamond cutting department.

2018. First wheel with inserts for OE customers.

2019. Implementation of zero-waste equipment for the painting department.

### **\ FONDMETAL'S FACILITIES**

The production facilities at Palosco, Italy, are characterized by a high level of automation covering the whole production process, wheels handling and warehousing.

Metal melting and treatment are made in modern furnaces. Degassing and chemical modifications take place in a completely automated plant which was designed and developed by Fondmetal. Casting is made on automated islands with gravity and low-pressure systems operated by robots, with an exclusive system of dust aspiration and filtering.

Machining takes place on robotised lines, and painting is made in modern plants. These are filtered and pressurised plants where the operations of degreasing, chemical anti-corrosion treatment, application and curing of paints are completely automated. The packaging is done by qualified personnel and quality control is performed on each individual product.

The respect for the environment is highly valued during all stages of the production process. The use of low-impact raw materials, the energy saving, the use of constantly well-maintained plants, the collection, treatment and automatic recycling of slag and residues of the production process ensure this primary goal.

## 9PERFORMANCE \ 01

LIGHTWEIGHT= PERFORMANCE

Reducing the wheel mass does not only mean reducing the vehicle total mass: it mainly means reducing the unsprung mass.

Lower weight of the unsprung mass ensures better tyre grip on the road surface.

# SIGNATURE

#### SIGNATURE\03

\ 85

Calling it "exclusive" might be reductive: Signature is synonymous with haute couture, as it offers eight styles of light alloy forged wheels which are literally tailor made.

With Signature line, the alloy wheel now embodies the luxury of being inimitable, thus expressing the uniqueness of its user.

STYLE IN MOTION

#### STYLE IN MOTION \ 04

Producing wheels is, for Fondmetal, more than just manufacturing an accessory, it is the art of combining 50 years of history and love for motorsport. Creating new designs that combine high-tech processes with purpose-built aesthetics is the driving force behind our passion.

Style in Motion wheels represent the best Fondmetal product with different designs in a variety of sizes and finishes to fit the widest range of cars available on the market.

SUPERTUNING

#### SUPERTUNING \ 05

This line includes four premium-size designs characterized by a concave style and luxury finishes: the SuperTuning Concave (STC), which are featured by a different design between the front (sometimes flat to ensure a perfect fitment even to the most performing brake systems) and the rear (conceived to obtain the deepest possible concavity).

STC models look strong and dynamic and they are synonymous of aggressive style.
